UNA

The Una (= 'what') language is spoken by approximately 3,500 people grouped in 40 villages along the Ey, Sayn, Mo, Yamiyl, Kiynok, Ira, Mina, Be and Yay rivers. These valleys are located between 139° 50' and 140° 20' Eastern longitude and 4° 32' and 4° 54' Southern latitude within the boundaries of the Kecamatan Kurima, in the Kabupaten Jayawijaya, in the province Irian Jaya ...

The Una language is part of the Goliath Stock Level Family of the Central New Guinea Macro-Phylum which is also called Trans-New Guinea Phylum. The term 'Goliath' is based on European nomenclature. Therefore it has been suggested recently, on account of the linguistic and cultural homogeneity of the people who live within a surprisingly large area of the Eastern Highlands, to designate the term 'Mek' as the common name for this people and their stock level language family.
- Louwerse 1978:45.

Four distinct Una dialects were noticed:
1. Central Ey River Valley dialect
2. Northern Ey River Valley dialect
3. Sayn River Valley dialect
4. Eastern Una dialect
- Louwerse 1978:45.

Real bilingual and multilingual speakers are rare. However, it is possible that in a single village, especially one situated near a language/dialect boundary, up to seven different dialects may be spoken which are all mutually intelligible. This is mainly caused by intermarriage from neighboring valleys (virilocal residence).
- Louwerse 1978:45-46.

... the approximately 3500 Una people. They live in 40 villages and hamlets of Una territory along the southern slopes of the central cordillera of the Pegunungan Jayawijaya (formerly Oranje Mountains, ...

The system of valleys where the Una reside runs mainly from north to south and is situated approximately between 139°50' and 140°20' eastern longitude and 4°32' and 4°54' southern latitude within the Eastern Highlands Kecamatan Jayawijaya, Irian Jaya Province, of the Republic of Indonesia.

The Una language is spoken by approximately 3500 people living in 40 villages and hamlets along the southern slopes of the central cordillera of the Pegunungan Jayawijaya (Orange Mountains) in the Ey, Sayn, Mo, Yamiyl, Kiynok, Ira, Mina, Be and Yay River valleys. These valleys are located between 139°50' and 140°20' eastern longitude and 4°32' and 4°54' southern latitude
within the boundaries of the Kecamatan Kurima, in the Kabupaten Jayawijaya, in the province Irian Jaya ... The Una language is part of the Goliath stock level family (Voorhoeve 1975:18, 46, 67, 69) of the Central New Guinea macro-phylum (Schiefenhövel 1977:270, 275) which is also called Trans-New Guinea phylum (Voorhoeve 1975:16, 63). The term 'Goliath' (de Kock 1912) is based on European nomenclature ... Therefore it has been suggested recently, on account of the linguistic and cultural homogeneity of the people (Schiefenhövel 1978:2) who live within a surprisingly large area of the Eastern Highlands of Irian Jaya to designate this people and their stock level language family with the term 'Mek' meaning 'water', analogous to the term 'Ok' which is used as a name for the neighbours of the 'Mek' to the east.

Four lexicographically distinct Una dialects were noticed:
1. Central Ey River Valley Dialect
2. Northern Ey River Valley Dialect
3. Sayn River Valley Dialect
4. Eastern Una Dialect

... Real bilingual and multilingual speakers are rare. However, it is possible that in a single village, especially one situated near a language/dialect boundary, up to seven different dialects/languages of the Mek Language Family are spoken, which are all mutually intelligible. This is, for example, the case in the village of Langda, where, besides the previously named four Una dialects, the Eipo, Lower Sela, and Kimyal dialects are also spoken. This is mainly caused by intermarriage from neighbouring valleys. ...

The terms Yali and Yalîmû are used by the Grand Valley Dani to designate their (north-) eastern neighbours. These in turn call their eastern neighbours Yali people. The name Yali thus relates to those living to the east. The term is now being used to designate the society living east of the Grand Valley, and the Yali themselves have accepted this designation.

In Yalîmû (the place of the Yali) there are two separate language areas. The first is called North-Ngalik (Bromley 1967) and it belongs to the Dani family. It is spoken in the Landi, Habilik and Upper Yahûlî valleys north of the range, and in the Kwik, Heluk, Seng and Solo valleys south of the central range. The dialects are mutually intelligible. The second language area, further to the east, is the Goliath (or Mek) language family. It is spoken in the Erok, Thai, Saynme, Eyme and other valleys further east and south of the range, and in the Eipo, Tap, Naliki, Iiup and Hîne valleys as well as in some villages east of the lower Yahûlî and along the Ubahak river, all north of
... Since this initial contact [in 1973] we found out that approximately 3500 Una people live in 40 villages and hamlets of the Una territory ... along the southern slopes of the central cordillera of the Pegunungan Jayawijaya (Oranje Mountains). The system of valleys where the Una reside runs mainly from north to south and is situated approximately between 139° to' and 140° 20' eastern longitude and 4° 32' and 4° 54' southern latitude within the Eastern Highlands Kecamatan Jayawijaya, Irian Jaya Province, of the Republic Indonesia.

* Una (Mt. Goliath; Oranje-Gebergte)
POP: +/- 5,000
LOC: Eastern Highlands on south slopes of main ranges west and east of Langda
- Silzer & Heikkinen 1984:56.

(Mt. Goliath, Oranje-Gebergte)
Mek (Goliath) Sub-Phylum Level Family, Western Group
Pop: 4,600
LOC: Eastern Highlands on south slopes of main ranges west and east of Langda
KABUPATEN: Jayawijaya
KECAMATAN: Kurima

* Una: 5,000 speakers reported in 1987, in the eastern highlands, on the south slopes of the main ranges, Irian Jaya. Also called Goliath, Mt. Goliath, Oranje-Gebergte, or Langda.

Eastern highlands on south slopes of main ranges east of Korupun, west of Ngalum, Bidabuh, east Weip Valley, west of Yay Valley. ... Similar to Eipomek. ...

UNA (GOLIATH, MT. GOLIATH, ORANJE-GEBERGTE, LANGDA) ...
4,000 (1991 SIL). Eastern highlands on south slopes of main ranges east of Sela Valley, west of Ngalum, Bidabuh, east Weip Valley, Yay Valley. ... 80% lexical similarity with Eipomek. ...
- Grimes 1996.

UNA (GOLIATH, MT. GOLIATH, ORANJE-GEBERGTE, LANGDA) ...
4,000 (1991 SIL). Eastern highlands on south slopes of main ranges east of Sela Valley, west of Ngalum, Bidabuh, east Weip Valley, Yay Valley, around Langda, Bomela, Sumtamon. Linguistic affiliation: Trans-New Guinea, Mek, Eastern. 80% lexical similarity with Eipomek. ...

* The eastern neighbours of the Sela people live in the Yay river valley just west of the Goliath Mountain, in the valleys of the Saynme and its tributaries and in the Eyme (or Heyme) valley system. ...

There are a few more populated valleys further east of the Eyme valley, in the catchment area of the upper Eilanden river.
Not much is known about those who live there. The same language -- Una -- is spoken throughout the entire southeastern sector of the Mek culture area. ...

Across the Weip river, which also functions as a language boundary, is the village of Bidabuk (1590 m). The Bidabuk people live far and wide on that side of the valley and even in some locations in the Yay valley. ...

*... Names used in the literature are Kimyal for the language of the Korapun people, named after one of the important clans of the Erok valley, Kimyal; Hmanggona for the language of the Nalca people; Una for the language of the people from Larye or Langda, named after the interrogative pronoun una "what"; Ketengban for the language in the area around Omban and Okbab; Yale (language) for the Kosarek people or the inhabitants of the In Valley. ...

There are two reasons against mapping language boundaries, firstly the phenomenon of dialect-chaining, ... secondly the smallness of the settled areas.

The territory of the Eipo, for example, stretches for a maximum of 15 km along the Eipo river, in the east-west direction the fathest distance is 2.5 km. The extent of Kosarek, Nipsan, Tanime and Bime is about the same, Nalca and Larye are slightly larger ... Between the inhabited areas there are immense stretches of uninhabited country ... Language or dialect boundaries would fake a structure that does not exist.

In addition to that, it happens time and again that speakers of one language settle in another language or dialect area, either because of marriage relations or trading partnerships or because of banishment from their own community or conflicts with their clan members. ... Language and dialect boundaries become irrelevant in everyday interaction and communication or they are built up consciously, ...

Instead of mapping boundaries I shall present the following diagram. A plus sign (+) means that the speakers still understand each other, so that their languages, according to the definition, must be regarded as dialects. A minus sign (-) signifies that the speakers do not understand each other, so that they are members of different language groups. A question mark
means that either the speakers were not sure of their judgement or that I could not verify the relationship of the dialects or languages. Two question-marks signify that it took the speakers several days to get used to the language in order to be able to understand it. The results of the lexicostatistic calculations of 1978 have also been taken into account. ...

</table>

In the table above three clearly defined language areas can be made out without much difficulty.

1. The entire East including the Southeast with Kinome; in this area only the relationship between the Okbap [sic] language and the ware language is uncertain. According to the criterion of mutual understanding they are different languages, according to the criterion of shared basic vocabulary (85%) they are merely dialects. This problem will be treated further below. [i.e., Kinome, Kamume, Omban, ?Okbap]

2. The Northwest from Konae up to the Yalenang. i.e., Konae, Nipsan]

3. The Southwest with Sela and Korapun. [i.e., Sela,
Even today the outer borders of the Mek languages can only be marked correctly in parts. The eastern border is probably formed by the ranges between Kloof and Sobger, between Okbab and Ok Bi and the Juliana mountains. The western borders are the lower Yaholi, the ranges between Kosarek and Yaholi respectively between Obahak and the upper Yaholi. ... In the North and South the borders are lost in the far less densely populated flat land. ...

... Eipo, Larye (Una), and Tanime form one language area according to the criterion of mutual understanding as well as that of the percentage of shared cognates. But what is still more important is the fact that the inhabitants of the three valleys communicate with each other. There are many trading-partnerships and marriage relationships. In all of the three valleys the three "dialects" are spoken. Many of the children in Eipomek have mothers from Tanime or Larye, learn their mother's dialect and also learn the Eipo language in the communication with their fathers and Eipo-speaking age-mates. The rhythm of acquisition of the first dialect from one generation to the next should follow that of marriage relationships; however, this has never been documented.

With some caution a fourth language area can be singled out in addition to the three already mentioned, namely that of the Eipo language. Here one must always bear in mind, firstly, that the demarcation to the west (Nalca) and to the east (Bime) holds good under the assumption of a missing network of communication, of different suprasegenetal characteristics, and of different connectives and inflexional morphemes of verbs, but less on account of the criterion of shared cognates, and, secondly, that in the language area of Eipo-Una-Tanime we indeed find a high percentage of shared cognates and a network of communication, but that especially this centre of the Mek language area reveals phonological and grammatical differences making the assumption of language boundaries more likely than that of a dialect area. [i.e., Nalca, Eipomek, Una, Tanime, Bime; + ??Diduemna]

In the western as well as in the eastern Mek area there are relatively large and homogeneous dialect areas, the centre of diversity, however, is situated in the more closely limited area between Larye, Eipomek, Tanime, and perhaps also Nalca. According to the rules of dialect geography the west and the entire east must be supposed to have been the scene of relatively recent migrations, proceeding from the centre as their starting-point.
